Product Description

TP304 / 1.4301 Stainless Steel Coil Tubing A269 / A213 Standard Polished

Before a stainless steel coil can be slit, it needs to be made. That process involves a large slab of stainless steel hot rolled into a long, much thinner sheet. It is then cold rolled into even thinner sheets, imbuing the alloy with desired mechanical properties. This process ends with machines that recoil the stainless steel sheet into a master coil. Slitter machines cut the master coil into manufacturer-specified widths, which are finished with uniform edges.

Certain types of stainless steel are ideal for the slitting and edging processes. For example, ferritic steel is popular due to its corrosion resistance, while martensitic alloys are chosen due to their toughness.

Product category

Hot Rolled Stainless Steel Coil/Sheet	
Steel Grade	301, 304, 304L, 316, 316L, 316Ti, 410S, 410, 405, 430
Standard	ASTM A240/A240M, ASIFFI SA-240, SA-240M, JIS G 4304, EN 10028-7, EN 10088-2
Thickness(mm)	3.0-14.0
Width(mm)	1000-2000
Length(mm)	Sheet: ≤6000; Coil
Status	Solid Solution and Pickling; Annealing and Pickling
